EdsLevel2Dom

Download

★★★★★

EdsLevel2Dom_V2.0.1
A simple histogram indicator of depth of market (DOM) data also known as standing, limit and stop orders. Displays along side the price scale with a handy adjustable margin to avoid other price scale indicators. Written for simplicity and speed of execution. A performance test has been added to evaluate the Refresh Delay parameter.
This is EdsLevel2Dom_V1.0 (NT7) rewritten for NT8.

Discussion thread: <https://futures.io/elite-circle/30977-edslevel2dom-discussion-thread.html>

V2.0 Initial release
V2.0.1 fixed lock function

★★★★★

This is not a download, this is a

Notice to all Downloaders

As at NT8.0.4, Feb 2017, Ninja Trader LLC has been struggling to contain errors and memory leaks on some indicators. It may not be the code itself but something internal within NT8. It seems to be due to the multi-threaded nature of NT8, ie. multiple cores being used to make calculations. In regards to 'memory leaks', I refer to NT8 sharply escalating it's use of memory, causing NT8 to crash eventually. This is often caused by objects in code being created in one thread and the indicator goes looking for it in another thread.

Please be patient and use indicators carefully, especially on tick replay.

The way to monitor/help your NT8 is thus:

- Hold down Ctrl & Alt and then press Delete. This will open up your task manager. You can observe NT8's memory usage. If you see NT8 memory sharply increase then you may have a 'memory leak'. You should shut it down by clicking on NT8 in the task manager and then 'End Task'. Keep in mind this will not save your latest workspace.
- Keep your 'Log' tab open to see for any warnings. They will usually appear in orange. If you have an OnRender DirectX warning then chances are NT8 will have a memory leak and will crash a period of time later. Shut down as above.
- I always open NT8 now with ONLY a simple workspace (all else should be closed) with only a couple of naked minute/tick charts on it. Connect to your broker, let the data load, then open your complicated workspaces. This seems to solve most memory leaks. The change from Historical state to Realtime seems to cause NT8 some grief with the OnRender method.

I do feel that NT8 has kept us in the dark with communication, so that's why I'm giving you some tips that work for me. I'm interested if you have any other ideas that work for you 😊

MacdRR V4.0.2 NT8.0.4 + gradient + nullback setting Download ★★★★★

MacdB V4.0.2 NT8.0.4 + gradient + pullback setting

22 Feb: Fixed alert message. Added file selector for sounds.

Includes:

- * Paint bars.
 - * Candle outlines.
 - * Paint background of panel and chart.
 - * Standard option.
 - * **New pullback option.** If the dots are above/below the average then the dominant trend colors the dots.
 - * Gradient option with improved gradient methods.
 - * **Radial gradient** 'bling' for your dots.
 - * Custom audio alert.
 - * Gapless option. Use intraday to ignore the opening gap. Useful for determining the opening trend.
 - * Chart signals for entry and exit, based on crossing of the zero line, average or bollingers.
 - * **New SignalIntSeries** using +1 for uptrend, -1 for downtrend to use in your strategies.
 - * **Choice between standard deviations or mean absolute deviation** (MAD).
- ** I plan to make a version soon that will accept several smoothers for calculation and I'm looking into Text to Speech for audio alerts, something NT should have done.

Make sure you extract the .zip file first to show the files. Inside you will find the .zip to import!

Make sure you insert the included audio files here: C:\Program Files (x86)\NinjaTrader 8\sounds

All new coding done according to NT8 best practices [here](#).

As usual, let me know if something ain't quite right.

Thank you Shuglu. I like the drop down menu. You not only provide us with a useful indicat

or but useful code for all of us to benefit from. This is what I like to see in indicators

. Good on you.

Regression Channel with fixed start V2 NT8.0.2 updated**Download**

★★★★★

**Regression Channel with fixed start V2 NT8.0.2 updated**

Updates::

Update V2.1.0 22 Jan=>

- * Bug fix: On some occasions when using fixed start the LRC would not adjust accordingly.
- * Made text messages more readable and less intrusive. (From feedback....thank you).
- * Added option for a start marker. (From feedback....thank you).
- * ZOrder adjustment - place behind or in front of bars.
- * For coders: 'Friendly' names enums - no more camel case enums!

Update V2.0.2 Jan=>

- * Added Mean Absolute Deviation thanks to 'spooz2'

Note: Make sure you have \geq [NT8.0.3.1](#) for the button to work without issues.

Included with this LRC:

- * Ability to start the LRC from any bar of your choosing via a button.
- * Directional coloring.
- * Bands

- * Four different price marker displays: Price, Standard deviations, ticks from the middle line, regression slope per ticksize (which enables you to compare the slopes of other instruments)
 - * Decimal places formatter....adjust to your liking.
- * Ability to use Raff channels as shown [here](#) in TASC Oct 1991
 - * You can use on any indicator 😊
- * Unlike the NT8 version, you can scroll backwards and the LRC will plot the past.

Note:

If using the LRC fixed start feature you will have to manually refresh the chart by pressing F5. This is the compromise of using an indicator instead of a drawing tool.

You can download the two videos [here](#) and [here](#) for setting up options.

Thanks, that's fine

[More...](#)**PriceLine V2 NT8.0.2 with timer****Download**

★★★★★

**PriceLine V2 NT8.0.2 with timer**

This price line has been morphed with the NT8 bar timer.

- * You can use the timer on time-based, tick or volume bars.
- * I have made a custom price marker that attempts to emulate the default NT8 price marker. (You can use this AddOn for your own indicators as well).
- * Set a threshold value to warn you when the timer exceeds the threshold value.
- * Choose the ZOrder to enable plotting behind or in front of the bars.
 - * Choose opacity of the line.
- * Set to plot the tick size thickness to use on Footprint charts. (These are not included).
- * The timer and priceline colors are automatically set to the data series/instrument price marker so you must change this within the data series menu.
- * Set the length to: Fullscreen, margin only, fullscreen minus margin, your length or timer only.

Notes:

- * The timer will plot only whilst you are connected.
- * The time-based timer is set off your system clock, so make sure this is correct.

You can download this video [here](#) to show you through the options.

Hello Traders, Rev 2...An astute trader found a slight oversight in the code. The line size went to a fixed width if history was not enabled. I have fixed this. Thanks Aregon!

Rev 1...I have enhanced the capabilities a little. Now you can name the event. In the example, I have the CL Pit Open, the Equities Open and the CL Pit Close. I hope that this is useful for you...

Bob

Hello Traders, Here is an NT8 indicator that marks the pit open, or any other time based event such as a news event or inventory report or the like. It paints a horizontal line from the event and extends for x hours. Since the time can be set, you could use several instances of the indicator for the Open, News Event or whatever you like. You have the Option of turning the text on or off and the option of printing historical events. Since the indicator uses a synthesized 1Minute time base, you can put it on virtually any chart type and the time-price mark will always be correct. I use it for the CL Pit Open

and important news events.

This is Rev 1. I added Line Width control

EXCELLENT IND VERY VERY USEFUL!

Trade Well
Bob

CAN WE HAVE IT FOR NINJA 7 ?

[More...](#) **BT Opening Range Indicator** **Download**

I found this somewhere on the F.I.O or NT forums and someone helped me convert it to NT8. You can set the start times and end times of the opening range and save them. Okay I received some comments about this indicator so I thought I would share them. I was told it is not always precise when plotting on a tick or volume chart. It may be because the begin / end time is not exactly at the open or the close of the bar. It works fine on minute charts. It may not work well for timeframes higher than 30 minutes. I am not a coder, but the author of this indicator is here:
<https://twitter.com/bearishtrader> and
<http://bearishtrader.blogspot.ca/>
