★★★★★

Wilder's Moving Average (Tested on NT8.0.8.0)

Wilder's Smoothing indicator was developed by Welles Wilder and mentioned in his book "New Concepts in Technical Trading". Wilder used the Smoothing indicator as a component in several of his other indicators including the RSI. Wilder's Smoothing indicator can be used in the same capacity as other moving averages. The smoothing indicator is used as an input in Wilder's other indicators such as the RSI, Wilder's Swing Indicator and Wilder's Volatility Indicator.

NT 8 Market Replay data for CL

Contract: CL 08-17

#### Download instructions:

download and unzip file in NT 8 replay folder  
 Documents\NinjaTrader 8\db\replay  
 The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

**Note:** this is Market Replay data for NinjaTrader 8. The format is different from NT7.

Also note, these downloads are likely not to include Sundays data.

 **Ribbon Trader NT8**
[Download](#)

★★★★★

This is the NT 8 Version of <https://futures.io/download/ninjatrade-7/indicators/1637-download.html?view>

I made a slight visual modification so that up/down arrows are painted once a trend stays with 4 blocks of the same color. The code logic hasn't been changed at all.

### HMA Color MTF

Download

Hello Traders, this is an NT8 indicator (exported from 8.0.7.0) that is a colored HMA. The HMA can be calculated from any chart type and period (Multi Time Frame). In the picture is a 15M CL chart. It has two instances of this indie. One is an HMA21 calculated from a 10 min chart and the second is an HMA21 calculated from a 10Range. The indie title displayed on the chart shows the type and period info, as does the title in the user configuration panel. The HMA is completely configurable for color, drawing type HMA Period, Chart Type and Chart Period. There is a label in the right margin of the chart that identifies the indicator. Depending on the timeframes of the chart vs the HMA, you may need to enable Tick Replay in the Data Series. Let me know what you think!

Thanks to Ninja Jim D for his suggestions.

Trade Well

Bob

Well done. Thanks

### CamsVpR4 Volume Profile for NT8

Download

CamsVp is a volume profile indicator for NinjaTrader 8 with added features of delta, footprint and imbalance. CamsVp has great flexibility in the selection of chart regions from which to generate a profile. The start and end of regions may be defined as window, date, current, bar and daily. There is also a handy mouse drawing tool to define regions. A region may be as small as one bar or as large as computer memory capacity. There is no limit as to the number of regions that can be drawn. Granularity can be chosen to minimize computer load especially for large time span profiles. CamsVp automatically configures itself according if a chart's Tick Replay feature is enabled. Calculation mode and bid/ask delta are affected. Scales may be mixed, for instance a volume profile can be shown with a Delta scale.

Detailed instructions and discussion thread is here:

<https://futures.io/elite-circle/42467-camsvp-volume-profile-indicator-discussion-thread.html#post645383>

R4: added Enable CamsVpRegion to control cross talk using multiple instantiations on same chart. 11/8/2017

R3: added volume imbalance, changed display to Bid/Ask, value area boundary line, improved text alignment, scale and bar opacity, 8/6/2017

R2: fixed granular bar offset, added Day and Volume granularity, improved value area calculation, added VA smoothing, fixed Right orientation for regions Bar and Daily, 07/07/2017

R1: initial release, 6/19/2017

**NT8 Hull Moving Average Color Change** [Download](#) ★★★★★

Hello All,  
Like many others, in migrating over to NT 8 many indicators are not available yet. I use the HMA often and prefer when color changes if rising or falling.  
Here's my conversion using the script found on the NT Forums here:  
<http://ninjatrade.com/support/forum/showthread.php?t=79551&page=7>  
Enjoy.

Works great

September 2nd, 2017 08:05 PM [Buscador](#) ★★★★★  
Thanks a lot for your work. Very nice.

**Spread** [Download](#) ★★★★★

Shows the difference between two instruments. Particularly useful for treasury spreads like FYT, FOB, NOB, etc. You must specify the front and back leg and the ratios. The CME lists current ratios here:  
<http://www.cmegroup.com/trading/interest-rates/intercommodity-spread.html>  
Example: NOB spread  
FrontRatio: 3  
BackRatio: 1  
FrontLeg: ZN 06-17  
BackLeg: ZB 06-17

Note that it adds a separate data series for each leg of the spread so you don't need either leg to be the main chart data series (IE you could add NOB spread to an ES chart).

Thanks.

**Horizontal Ray DrawingTool** [Download](#) ★★★★★

This drawing tool is coded as a native NT DrawingTool class rather than within an indicator wrapper. There have been many requests over the years for NT to add a native horizontal ray tool but it has still yet to be implemented. This tool was created based on the original NT Lines.cs file.

I've yet to experience any issues, however, it is not advised that any trading actions be based on this add-on (i.e. alert to trigger a live market order if this horizontal ray is crossed). Hot-key activation is also supported through the standard NT selection dialog.

Exported using NT Version 8.0.12.0 64-bit (Standard)

**Edit (04/02/18): version 4 has been uploaded which fixes price label code that would sometimes display the wrong price**

Version: 4.0
