### Sample - Draw/Not draw indicator via Button V3.2

[Download](#)

★★★★★

Here is a **sample** of a panel button that turns an indicator visibility on/off via a 'click'. You **do not** have to refresh the chart each time.

Version 3.2

**\* Fixed for NT8b9. Recent NT8 changes to multi-threading created freezing when the chart was loaded.**

I was so used to my MarketDelta buttons that I had to do it for NT8 .

This indicator draws an EMA both via the Plot method and the OnRender method so you can see the code for both techniques.

Thank you very much to "Edge" for the original "button" code and help.

Version3 - Nov 2015:

\* Used 'UserControlCollection' instead of 'ChartControl' for safer usage and it does not interfere with the bars or plotting.

\* Created smaller button.

- \* You can have up to 10 buttons per panel (or more if you change the code). So you can add 10 ema's and specify which position you would like via 'Column#'.
- \* Buttons are hard-coded to plot at the top-left of the panel but you can change this in the code if you like via 'myGrid'.
- \* The button will appear within the panel the indicator is plotted. Please read the 'summary' at the top of the code for limitations of usage. Use at your own risk.

Version 3 - 1

\* Fixed bug that prevented button working when state changed from Historical to RealTime.

### UniRenko bar type NT8b9

[Download](#)

★★★★★

**FIX: Just updated for Beta 9. You must download this version.**

Universal renko bar type. Thanks to the original author.

Ported by Sim22, 2015. Version 1. NT8b6

Allows adjustment of tick, reversal and proxy-open increments.

Can also plot continuously or break at the end of a session via "Break at EOD" option.

To use this in a condition eg.

Code

```
//if using UniRenko.....do something.....
if ((int) BarsPeriod.BarsPeriodType == 501)
{
    // do something
}
```

### hollow candles

[Download](#)

★★★

Up candle is a hollow candle. This code was originally uploaded I believe by eDanny on NT 7. If you like dark or even black background and want to be easy on your eyes this indicator will help you.

I did add some comments regards to the conversion process on the "NinjaTrader 8 Indicators and More" thread. Tested with NT 8 B06.

Hope this helps,

atata

You are correct Zondor, however this also gives the ability to change the directional cand

le outline as well.

November 2nd, 2015 10:36 AM **Zondor** ★  
wuh? why would anyone need this when you can set upcolor to transparent in data series wi  
ndow?

### Volume Spread Analysis (VSA) Suite V1.3 - Basic NT8b9

Download

**V1.3**

## Volume Spread Analysis (VSA) Suite V1.3 - Basic - NT8RC1

Updated to RC1 Sep 2016

Another platform look-a-like.....visually 'cloned'.

**Make sure you unzip the zip file first before importing or you will receive a NT8 import error! There are multiple files within the first zip file.**

1. **New HLC ChartStyle** to reflect the rounded look of the TGv4 platform.

Two coloring modes are select-able:  
VSA logic. eg. Close[0] > Close[1].

Normal HLC eg. Close[0] > Open[0].

Up, neutral, down and 'lastbar' colors are selectable.

### 2. VSA volume bars.

Up, neutral, down and 'low volume' colors are selectable.  
Bands can be turned off but colors are hard-coded based on the TGv4 platform.  
Width of volume bars changes automatically to match the price bar width.

### 3. VSA SMA.

Up, neutral, down colors are selectable.  
The custom diamond plot is hard-coded but the size is user selectable.  
Hard-coded to Median input.

### 4. VSA Price Line

There are 4 user selectable plot modes to "hopefully" cater for different uses.

\*\*\*\*\*

Please unzip the .zip file first and [read the instructions](#).

The period settings of the SMA and the volume bars MA and bands are visually cloned and may therefore be off slightly, so adjust to suit yourself.

**There is plenty of 'OnRender' custom plotting included if you wish to dig your teeth into NT8 ninjascript.**

Update: V 1.1 Nov 2015

Can now choose colors for the equal close bar and last/live bar.  
Can now plot your own paintbars over the top of the chartstyle.

Update: V 1.2 Dec 2015

**Fixed a bug:** Removed the custom 'icon' due to errors when using two or more tabs with the same VSA chartstyle. Please download again or you will lose your tabbed charts!

Update: V 1.3 Mar 2016

General performance and visual improvements.

Enjoy

### UN Gom Delta

Download

No recorder needed, but chart data series must be in tick replay to show historical data. Tick replay makes it *SIMPLE* to code indicators like this.

Two indicators based on bid/ask delta:  
• bar histogram of non-cumulative delta  
• or  
• candlestick plot of cumulative delta.

These here versions only shows the information for the instrument on the chart. However, this *can* be done for instruments that are not on the chart. For example could show the delta for the SPY or the NQ contract on the chart of AMZN, synchronized to the bars of AMZN so that bar spacing would remain equidistant.

The screenshot only shows the cumulative version.

The installer will put these indicators into a new FOLDER called

thanx zondor. 😊

[More...](#)

### MESA Adaptive Moving Average

Download

**Updated on November 2:** suppressed invalid plotting during startup period and reduced its length.

Here's an explanation of the indicator by its creator, John Ehlers.  
<http://www.mesasoftware.com/papers/MAMA.pdf>

Same plots as the MAMA "system indicator". That version was translated from TradeStation® EasyLanguage® code without taking into account the coding flexibility of Ninjascript®, resulting in a bloated resource hog.

Changed code to eliminate unnecessary, duplicative calculations.. there were A LOT of them. 😊

Added multi color plotting.

The indicator will appear in a new FOLDER called Moving Averages.. look for it there.

Thanks Zondor for this.

Quick question - I tried to convert it into a signal generator, looking into the built-in

NT8 MovingAverage example - however, what I've seen is that the indicator values are compu

### Give NT 8 preference over other applications that are running.

Download

Name: **SetNinjaTradersPriorityHigh** Version 1.1

Exported with: NT 8.0.0.9 64-bit (Multi-Broker) - BETA  
To Import Indicator Into NT 8:

1. Download the attached file by clicking on the blue downward arrow

or the NT Chart image. Save the file. Do not open it.

2. From the Control Center window select the menu Tools > Import > NinjaScript...

3. Type into the first field the folder that contains the .zip file downloaded by your browser. When first displayed the field has C:\Users\... .

4. Press Enter.

5. Select the downloaded .zip file then click the Import button.

**ReExported with: NT 8.0.0.9 64-bit (Multi-Broker) - BETA to fix Import error.**

Updated: Oct 21, 2015 5:55AM - New Priority value of BelowNormal. New parm Show NT Priority. Priority now also checked/set in State.Terminated.

Author: James R. Walker

**NT 7 Version available** <https://futures.io/download/ninjatrade-7/indicators/1666-download.html?view>

**All the applications running on your computer equally share your computer's resources. The NinjaTrader application runs at Normal Priority with all the other applications. Especially during fast markets, when other applications are running on your computer, NT is not processing incoming data as quickly as your computer would allow and possibly losing trade data from your market data service. By default, this Indicator sets NinjaTrader's Process Priority to High, giving it preference over other applications that are running.**

**This Indicator allows you to set NT's Process Priority to one of four values: High, Above Normal, Normal, or BelowNormal. You may want to use High during your trading day and Normal at other times. You could also set it to BelowNormal to do backtesting in the background while you use your computer for other tasks.**

Adding this Indicator to one chart in your Workspace will set NinjaTrader's Process Priority until you exit NT. The Indicator will check before setting the Priority and do nothing if Priority is already set to the Priority specified in its parameter.

Quoting from <http://www.eightforums.com/tutorials/23830-processor-priority-level-set-processes-windows-8-a.html>: "Windows 8 shares the processor time between all running processes based upon their priority level. If a process has a higher priority, it gets more processor time compared to a process having a lower priority. . . . The changes you make to the priority level of the current instance of an application or process are only temporary and not set permanently. Once you close the application or restart the PC, Windows 8 will automatically set the priority back to default for the process or application."

#### Parameters:

Select Priority - Select High, Above Normal, Normal, or BelowNormal for NinjaTrader's Process Priority. The Default is High.

Hide Indicator Name - Prevent display of indicator's name at top of chart if true. Default is false.

Show NT Priority - Display NT's Priority at top of chart. Default is true.

To have nothing displayed at top of chart set Hide Indicator Name parameter to true and Show NT Priority to false.

Debug message to Output Window - If true then debugging Output messages printed.

Details: [Give NT 8 preference over other applications that are running.](#)
