ATRback ★★★★★

Hello Traders, there are certain time slots during the day where the volatility increases. This could be due to news releases at certain times or institutional adjustments after the 'morning meetings'. This indicator is a modification of the ATR indicator that makes the average of the ATR 1 (range of one candle) and allows you to set how many candles back to evaluate. For simplicity the candles in the pic are set to 60minutes and the 4 instances of ATRback are set to look back 23, 46, 69, and 92 candles (1,2,3,4 trade days back) so you can spot the time slots where the range of the 1 hour candles tend to increase. Another application might be to set the lookback in intervals of a week, so you would be looking at that day of the week 1,2,3,4,weeks back.

This indicator has worked on several instances of NT 8 and several bar types. It was exported using NT8 v14.2

Let me know how it works for you...

Trade Well...

Bob

Volume - Colored Based on Volume

A Volume bar is colored the Volume Subgraph Primary color if its volume is higher or equal to the previous bar volume.
A Volume bar is colored the Volume Subgraph Secondary color if its volume is lower than the previous bar volume.

Connors RSI (amaConnorsRSI) ★★★★★

Version 1.0 March 6, 2017

Created by Larry Connors, this indicator is a composite of three separate components. Two of the three components utilize the Relative Strength Index (RSI) calculations developed by Welles Wilder in the 1970's, and the third component ranks the most recent price change on a scale of 0 to 100.

In effect, the three components combine to form a momentum oscillator. The output value between 0 and 100 then identifies short-term overbought and oversold conditions.

Thanks again!

June 20th 2018 v1.0

This Indicator displays the duration of the current bar. Tested and works on time, tick, volume and range bars.

- Font Color
- Font Select
- Show Bar Timer Label
- Hide Indicator Name
- Show all tabs

I'm self taught and just starting to understand what's required to convert my NT7 indicators over to NT8 so let me know if this can be improved.

Thanks

November 9th, 2018 11:39 AM **BoltTrader** ★★

No matter what I change in the settings, the counter doesn't appear on my chart. I have t

ried on both volume and tick charts. I also agree with earlier suggestion change this to

Count Down not Count Up. Hopefully, you can correct this.

June 28th, 2018 11:21 AM **Harleking** ★★★★★
Nice Indicator.

Just one minor thing: Is it possible to have the bartimer count down instead of counting u

p?

NT 8 Market Replay data for CL

Contract: CL 06-18

Download instructions:

download and unzip file in NT 8 replay folder
Documents\NinjaTrader 8\db\replay
The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

Note: this is Market Replay data for NinjaTrader 8. The format is different from NT7.

NT 8 Market Replay data for CL

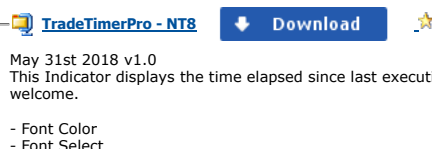

Contract: CL 05-18

Download instructions:

download and unzip file in NT 8 replay folder
Documents\NinjaTrader 8\db\replay
The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

Note: this is Market Replay data for NinjaTrader 8. The format is different from NT7.

May 31st 2018 v1.0

This Indicator displays the time elapsed since last execution. Tested and works although I am still on NT7 so any feedback welcome.

thanks 😊

Z-score (amaZScore)

Download

★★★★★

Version 1.3 September 25, 2017

The **Z-score** or standard score is a numerical measurement of a value's relationship to the arithmetic mean of the data set. The Z-score is the signed number of standard deviations by which the current value of a data point is above the mean value or below the mean value as calculated for the selected lookback period.

For a normally distributed sample 95.8% of the z-scores of all data points fall within the range [-2, +2]. A Z-score of 0 indicates that the data point is identical with the arithmetic mean of the data set.

The Z-score is a normalized oscillator that can be used to identify extreme readings of the input series. The Z-score is calculated by dividing the absolute difference between a data point and the arithmetic mean by the standard deviation.

One of the main applications of the Z-score is that it can be used to normalize any oscillator. For example, the MACD is a non-normalized oscillator which does not pass the c-test introduced by William Eckhardt. However, when the Z-score is used to normalize the MACD, the resulting oscillator uses a normalized scale and will pass the c-test. The normalized MACD is obtained, when the MACD is used as the input series for the Z-score.

BetterBrick ChartStyle

Download

★★★★★

This is the NinjaTrader 8 version of the BetterBrick ChartStyle, which is especially useful in conjunction with the BetterRenko Bar Type.

You can find the discussion thread here: <https://futures.io/elite-circle/4978-better-renko.html>

History:
v1 20100807 - @Aslan created to go with BetterRenko
v2 20100812 - @Aslan changed to paint OHLC bar for live bar
v2 20150719 - @DaleBru converted to NT8. Exported with NinjaTrader 8.0.0.5
v2 20170102 - @shannmugs added missing "Open" line
v2 20180306 - @DaleBru changed ChartStyleType enum value that conflicted with recent NT8 update
v2 20180409 - @DaleBru exported with NinjaTrader 8.0.12.0
