Thanks you very much for updating so quick. Works perfect

Sample - Decimal Place Price Formatter Helper V1.2 NT8b10 [Download](#) [★★★★★](#)

The 2 sample indicators here include a simple cut and paste code to enable you to directly format your indicators' price markers (or within market analyzer) directly in your properties configuration. It uses an addon called 'Sim22_PriceFormatter' to calculate this.

As of beta 10 this feature is not yet available, but I have requested it....lets just wait and see 😊

Features:

- * Set decimal places from 0 - 7 (including 'SameAsInstrument' setting for your price panel indicators).
- * Will not 'round to tick size' for instruments like the ES, but reflect the true value of the indicator instead.
- * Works on bond prices if set to 'SameAsInstrument'.

You will find the two indicators within the Indicators>Samples folder.

I will not make other indicators for you so don't ask.... this is a helper to help you do it! 😊

Remember this for beta so let me know of any bugs via pm. Any suggestions too.

Thanks for the help.... I have a bunch of custom NT7 indis that I built that need to converge. I am just now starting on 8... Thanks

AggregateM++ Mean Reversion Oscillator V1 NT8b9 [Download](#) [★★★★★](#)

David Varadi's AggregateM++ Mean Reversion Oscillator V1 NT8b9

Quote from the link below:

"The Aggregate M indicator is based on the concept that in the long term the market trends, while in the short-term the market is noisy, and has a tendency to mean-revert. Why not combine the two concepts to keep life simple? The Aggregate M is supposed to reflect an adjusted median that is filtered for short term noise. The median is a far more accurate measure of central tendency than a simple average especially with noisy data. Taking a superior measure of trend and filtering out some of the noise by adjusting for short-term mean reversion creates an even better median. The Aggregate M is now both trend and mean-reversion rolled into one."

Details: [AggregateM++ Mean Reversion Oscillator V1 NT8b9](#)
Submitted by: [Sim22 \[?\]](#)
March 26th, 2016

Full details [here](#)

Note: I have changed David's variable names and used percentage values instead of decimals.
Please read the comments within the code itself.

Remember this is for beta so please PM me with bugs rather than responding in comments. Thank you.

Thank you. Very good

Coding Tool - OnRender Helper V1 & 2

Download

★★★★★

Coding Tool - OnRender Helper V1 & 2 (nt8b10)

OnRender Helper is a tool for coding, not trading.

I became tired of sometimes 'losing' my 'OnRender' plots because of chart scale values so I made a 'jig' of sorts to help with this. 🤖

OnRender Helper enables you to see most ChartControl, ChartBars, ChartPanel and ChartScale properties in realtime as you manipulate the chart and bars.

It helps dispel confusion when coding so you know exactly how, for instance, ChartBars.ToIndex relates to ChartControl.LastSlotPainted or if you want to see the current pixel value of ChartPanel.Y or how many bars are painted on the chart etc etc.

Features:

- *You can place in any panel (and all panels) so you can find the properties specifically for that panel.
- *Works on multi-tabbed charts.
- *V1 sits within the panel and is quite basic, although it does share all values.
- *V2 opens a new window so it does not obstruct your chart. You can open the window via a toolbar button.
- *V2 - open a DataBox and view the current bar value.

Coding examples:

- *How to insert/remove a toolbar button.
- *How to open a new window via a toolbar button.
- *How to create a hyperlink to a website (NT8Help) that opens in a browser.
- *How to access chart/bar properties and convert into string format.

Remember this is for beta so please PM me for bugs. Suggestions and ideas are welcome also!

Equivolume ++ ChartStyle (with Auto size bars option) V1

Download

★★★★★

Equivolume ++ ChartStyle (with Auto size bars option) V1

How does this differ from the standard NT8 one?

Please download from the link [here](#) as the zip file is not working

* Includes 'Autosize' option set to true by default that adjusts the bar width to the thickest equivolume bar, so no overlapping will occur.

* I have also **recorded the thickness formulae** to show absolute comparisons rather than approximate.

* It also includes my **CandleStick++** opacity and outline customization features

Remember this is for beta, so PM me with any bugs or questions.

Thanks to 'TropicalRecon' for encouraging me to 'fix' this one.

Prior OHLC Day, Week & Month MTF AIO V1.1

Download

★★★★★

Prior OHLC Day, Week & Month MTF AIO V1.1

Updated to RC1 Sep 2016: Do not delete or comment out !BarsArray[0].IsIntraday since this is a safety check to make sure you do not use on a >= Daily chart. Rather, change to !BarsArray[0].BarType.IsIntraday or download this new update.

Will work on Renko bars

* Plots prior Open, High, Low & Close.

* Daily, Weekly & Monthly all in one (AIO).

* Uses minute data behind Renko charts to plot accurate levels.

* Has a button you can use to show/hide the plot.
So you can plot several indicators per chart and hide them when not needed 😊

* Can use solid lines.

Update April 2016:

Minor code update to prevent plotting/rendering issues.

Remember this is for Beta, so please PM me for bugs or fixes.
