#### Entries

##### **Market Replay CL 11-18 (NT8)** [Download](#)

##### NT 8 Market Replay data for CL

Contract: CL 11-18

##### Download instructions:

download and unzip file in NT 8 replay folder  
**Documents\NinjaTrader 8\db\replay**  
 The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

**Note:** the archive contains only the dates with the most volume for this contract, meaning, this is data relevant only to when the contract becomes the front month.

##### **Risk / Reward drawing tool (updated)** [Download](#)

Ninjatrade comes with a built-in risk/reward drawing tool. However i like the one from tradingview much better. This drawing tool adds a tradingview look-a-like risk/reward tool to ninja trader for both long and short positions. When placing a R/R drawing tool on your chart you can move it around, drag the stoploss/target to its correct price levels and the risk/reward ratio will be updated in real time.

After installing you can find the risk/reward tools under the drawing tools menu. There's a long position tool and a short position drawing tool. Note you can assign keyboard shortcuts to the risk/reward drawing tools using the tools->Hot Keys menu.

3-11-2018 : version 1.0.0.0

**5-11-2018 : version 1.0.0.1 bugfix to make it work with all instruments**

 Awesome job!! Can feature be added to let show risk/reward in dollars?

November 17th, 2018 07:49 PM **KillerJukeBox**   
 Thank you for this, its a big improvement from NT's built in one , and I do love TV's impl

ementation.

November 4th, 2018 11:20 PM **Ratdog**   
 Absolutely great, TY.

Any chance of combining it to where we can use one tool for longs and shorts?

Any chance of adding "Multiple targets" to it?

November 3rd, 2018 11:43 PM **skfutures**   
 The tick is not "tick";

1 Tick = 1 point (100 ticks) in CL.

I hope you can make adjustments.

## Tradingview \$TICK window

Download

For my trading i make a lot of use of the \$TICK. Sadly though.. ninja brokerage does not supply a really good \$TICK index.  
So until now i always had a web browser open showing [tradingview's \\$TICK](https://tradingview.com) in the bottom left corner of my screen.  
It worked.. but i had to open the web browser every trading session, scale it and move it to the correct location on my screen.

So to make life easier , i created this add on.  
This add-on adds new menu item to *New menu* called *\$TICK*.  
When you selected it a new ninja trader window opens which shows the \$TICK from [tradingview.com](https://tradingview.com).

Since it's a ninja window , its part of your workspace and ninja will automatically open & position it the next time you startup ninja again.

Note.. by default you will see the light skin (white color) of [trading view](https://tradingview.com). But since the \$TICK window is just hosting IE as a webbrowser you can interact with, and login into tradingview right from the \$TICK window it self. After logging in with your credentials you can right click on the chart to choose the dark skin as you see in the screenshot

1-nov-2018 : version 1.0.0.0

## RulerV4 for Ninjatrade 8

Download

Is there anyone that can code the Ninjatrade7 indicator named "RulerV4" by MBAgearhead. He did a fantastic job and this indicator is invaluable. It is exactly what many of us were looking for. If you haven't used it, everyone should take a look. However, I am also transitioning to Ninjatrade 8 and would very much love it if someone could code that indicator for Ninjatrade 8....that would be so awesome !!!

## MACDBBLines (amaMACDBBLines)

Download

Version 1.3 October 30, 2018

The **MACDBBLines** indicator is built from a standard MACD indicator with Bollinger Bands added to the signal line. The MACD values are shown as dots. This indicator is typically used to generate with-trend entries when the upper or lower Bollinger Band is violated.

Minor trend: The minor/lower timeframe trend is up when the MACD is rising. It is down when the MACD is falling.

Major trend: The higher timeframe trend may be taken from the MACD itself. An major uptrend is signaled when MACD > 0, while MACD < 0 stands for a major downtrend.

Public Properties: The indicator comes with a few public Series<double> that can be accessed via other indicators or automated strategies. These will also be shown in the strategy builder. The series "Trend" may be used to detect the minor trend.

"Trend" will show the value +2 when the MACD is rising and above the upper Bollinger Band, -1 when it is falling and above the lower Bollinger Band, -2 when it is falling and below the lower Bollinger Band. You will further find two Series<double> "LongSignal" and "ShortSignal". "LongSignal" will return +2 for an upper band violation in a major uptrend (strong signal), +1 for an upper band violation in a major downtrend (weak signal) and 0 for no signal. Accordingly, "ShortSignal" will return +2 for a lower band violation in a major downtrend (strong signal), +1 for an lower band violation in a major uptrend (weak signal) and 0 for no signal.

Market Analyzer Column: The indicator comes with two separate market analyzer columns. The first column will simply indicate the trend and return values based on rising and falling MACD above or below the Bollinger Bands as described above. The second column will return entry signals, where +2 stand for a strong long signal, +1 for a weak long signal, 0, for no signal, -1 for a weak short signal and -2 for a strong short signal. For the market analyzer I have squeezed long and short signals into a single column, as there is little space on a market analyzer. For the Series<double> objects, I have separated the LongSignal and ShortSignal series, as they are designed to return positive values or 0 for no signal only. Please pay attention to the difference.

Paint Bars: The indicator comes with paint bars that reflect the minor trend. The colors are similar to the colors for the MACDBB dots, but you may differentiate between upcloses and downcloses.

Sound Alerts: The indicator comes with sound alerts that will be triggered when the upper or lower band is violated, or when the major trend changes.

## Expected Rolling Volume

Download

This indicator compares current rolling volume for a user selected time frame and compares it to an expected volume for a user selected time frame over a user selected n period in days.

The standard settings are set to 10 minute rolling and 10 minute expected with a 13 day lookback period. So, basically the bar plot shows the current continuous rolling 10 minute volume and compares it to the line plot that is an average of every 10

Details: [Expected Rolling Volume](#)

Submitted by: [WoodyFox](#) [?]

minute time slot over the last 13 days.

You also have an option to exclude user selected days from the lookback period.

I find this works well with range or tick bars, but also works with time based bars.

CSI V1

Download

★★★★★

This indicator is inspired by Pete from JigSaw Trading. He likes to call it the Cumulative Sheep Index, but it actually compares volume on the current bar to the average volume for the same time of day, calculated over the last X number of days.

You can set the number of days and use it on bars of any duration. I have no idea what it will do with non-time-based bars, so be prepared for it to blow up, if you try that.

Please be aware that the smaller the bar duration and the larger the number of days being averaged, the longer it'll take to complete the plot. 1-min bars and 60 days, for example, take several minutes to complete.

There is an option to have some of its data sent to the Output Window, so you can assure yourself it's working, in case you choose bars and days that take a very long time to calculate.

Yours to download.

(In answer to the question posted in the 2nd 'thanks', yes. The values in the right column show the difference in volume between the current bar volume and the average volume for that bar for the previous X number of days.)

Elliot Wave Drawing tool (Updated)

Download

★★★★★

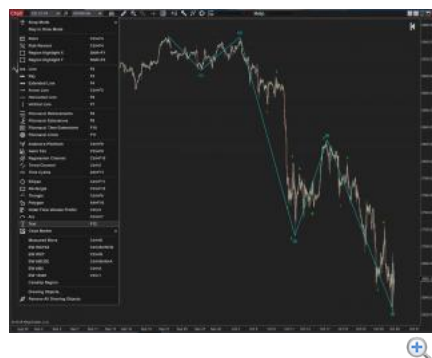

Supported waves are:

- 12345
- ABC
- ABCDE
- WXY
- WXYZ

For each wave you can select if you just want to see the labels, or also the wave lines itself and the degree of the wave.

After installing you can find the Elliot wave tools under the drawing tools menu.

Note you can assign keyboard shortcuts to any of the Elliott drawing tools using the tools->Hot Keys menu.

Measured Move Drawing tool (Updated)

Download

★★★★★

This is a simple custom drawing tool for drawing measured moves as described in [Trading The Measured Move](#) by David Halsley

The drawing tool allows you to simply draw the measured move from 0-> 100% -> 50% -> to -23.6%

After importing, you should see a new menu item 'measured move' in your drawing tools.  
Select it, draw the 3 lines and voila ;-)

28-10-2018: fixed some small issues
