[LBR Oscillator](#) [Download](#) [★★★★★](#)

Shows the difference between fast and slow SMA. The dots show momentum from previous highs or lows.

Converted from LBR 3/10 Oscillator by Keith.

Enjoy!

[Fractal Pivots](#) [Download](#) [★★★★★](#)

Converted from NT7 Fractals_Mike indicator. Based on this definition.

<http://www.investopedia.com/terms/f/fractal.asp>

Hope you enjoy!

UPDATE: 3/26/17 Fixed bugs where you could not save in a chart template and so its less sluggish on chart.

Its been brought to my attention this indicator may or may not use excessive RAM. Word of caution if you have issues using this indicator. I personally have not had issues besides sluggishness moving the x-axis.

PM me for issues.

 Just watch the RAM go up up up steadily in Task Manager as you use this, until Ninnie cr

ashes. Every single point on each of those plots is a separate drawing object that KEEPS u

sing RAM from the time it is drawn until Ninjatrade shuts down. Or crashes.

SwingInfoPro

Download

Mar 17th 2017 Version 1

This Indicator displays the swing information at cursor position, useful for quickly gauging the current swing duration and distance in ticks within the Toolbar with options to customize including:

- Font Color
- Font Select
- Show Swing Information Label
- Hide Indicator Name

I'm self taught and just starting to understand what's required to convert my NT7 indicators over to NT8 so let me know if this can be improved.

September 27th, 2017 10:17 PM **Zoombie**

Absolutely love using this for quick measurements!

It has one issue I seem to run into at random when switching between workspaces with diffe

NT8 Workspace Startup tool

Download

**NT8 Workspace Startup tool**

I built this little tool to help reset my _WorkSpace.xml file.

Example of use:

Upon coding an indicator you forget to dispose of a resource so when pressing F5, NT8 crashes. The problem is NT8 will reload that last workspace....only to crash again....and again. You want to restart with another workspace loaded so you can fix the problem, right?

Well, the old and tedious way is to open your _WorkSpaces.xml file, search for OpenWorkspaces and delete the entries, replacing them with one/some default templates. After doing this a hundred times...I decided enough is enough 😊

(I believe you can save load NT8 to do a similar job, but I like the flexibility of choosing my own workspaces to load.)

When NT8 is closed just run the .exe file and drag and drop which workspaces you want to load up upon the next restart. Instructions are inside the zip file. Do not import into NinjaTrader!

If you wish to see inside the .exe file just use any decompiler like [DotPeek](#).

*** The NT7 version is [here](#)

Center of Gravity / Polynomial Regression Channel / Belkhayate COG

Download

This is the Belkhayate COG (Center of Gravity) indicator. Also known as a polynomial regression channel with 3 std deviations and many other names. I transported this code directly from [here](#).

If anybody has any useful information regarding the usability of the indicator I'd appreciate the feedback. The fact that it repaints takes a lot away from it, but here it is in case someone has use for it!

Thanks

April 4th, 2019 11:40 AM **Maxie** very helpful, thanks

August 3rd, 2018 04:09 PM **Zephyr** I'm a HUGE believer in the Polynomial Regression Channel. If it's coded correctly, it's h

ighly predictive for support and resistance. I use 2 of them on my charts. One is longer

term (150 - 200 bars for daytrading), and one is short-term (50 bars). I only use upper a

July 8th, 2018 05:09 AM **Ratdog** Instant money maker when applied correctly.

May 27th, 2017 12:55 AM **romus** I am keen to see live results from trading it (about to test on some strategies in NT7) -

even though it repaints, but as long as highs and lows stay within extremes the results sh

ould be as per backtesting.

ADXVMA Color Bands

Download

R3:12/20/2018 - I added a switch to show or hide the indicator. I renamed it to ADXVMAButtonBand.
R2: 9/23/2018- I noticed a small error when displaying the Period in the title block.

R1: 2/22/2018- I found an error in how larger user inputs were being handled for the volatility band multipliers. If you were

using < 4 multiplier, then you will not see a difference.

Hello Traders, I have added color and Volatility (Keltner-esk) Channels to the popular ADXVMA. You can select your colors for an Up trend, Down trend or Neutral. The Keltner Bands can be colored and set to the multipliers that you prefer. In the picture, the ADXVMA is set to 5 periods and the bands are set to 1.5 for the inner band and 2.5 for the outer band.

Many Thanks to Zondor for the original NT8 coding of the ADXVMA.

Trade Well
Bob

Quality of life improved- thanks!

[Delete your NinjaTrader 8 cache](#)

Download

Run the console app to delete all files and folders within the 'NinjaTrader 8> db> cache' folder.

The NT8 data cache folder saves pre-formatted data to suit your bars types, the purpose of which is to enable faster startup times. Sometimes in certain circumstances your chart bars will be full of errors, so it doesn't hurt to clear the cache once in a while, or every day if you are having issues.

Use only if you are having problems with data, tick replay indicators or if you have modified your bars types.

This will **NOT** make a backup of your cache files, so use carefully! It WILL, however, check for NT8 being open and advise you as such. It WILL check for your cache folder being empty and advise you as such.

This was built using an English speaking culture on Windows 10. It directs the delete command to: 'yourDocumentsFolder\NinjaTrader 8\db\cache'. This will not work on XP. Although I have tried to use code to work on all cultures, I have not tested it as such.

Thanks to [bobc635](#) for suggesting this simple concept.

Tips:

* Extract the file to the desktop and run from there.

* If you wish to see inside the .exe file just download a free decompiler like [DotPeek](#).

This is great, thanks so much. I've been amazed at what a complete rip off the Forex bid/a

sk spreads are. Where I would have been making \$350 with the same price move in the future

s markets, I am at a \$25 loss or so in Forex. It is so important to choose the right marke

DValue Area Profile Indicator

[Download](#)

This is a conversion of the DValueArea developed by Ben L. and originally coded for the NinjaTrader 7 platform by DeanV. I found it on the Ninjatrade Support Forum, converted by Ninjatrade Support.

It shows the developing value area and POC, also pre-session. Profile types are VOC, TPO, VWTPO and VTPO. You have the option of showing a realtime POC.

Please contact the original author for any questions or comments.
