PriceLineV1

This indicator merely draws a horizontal line at the current price, updating as price changes.

I find it kinda handy for noting when price is approaching previous turning points without drawing S/R lines all over the place.

NOTE:
Version 8.0.15.1 of Ninjatrade includes an indicator they cleverly called PriceLine. It will break this indicator, but provides the same functionality as this plus can show a Bid and an Ask line. rendering this indicator obsolete.
(10/4/18)

BarsInARowV1

As requested, this indicator has been updated for NT8.

It merely counts the number of rising and falling bars that occur in succession, resetting the number every time a bar either goes the other way or closes at the same value as it opens.

This also includes an SMA of both rising and falling bars with a user-configurable SMA period.

Hope you find some use for it.

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

Note: this is Market Replay data for NinjaTrader 8. The format is different from NT7.

Is there any way that you can also

augment an audible alarm to

sound, when say a preset two or three bars

Multiple Selections for Candlestick Patterns NT8

Download

★★★★★

Version 1.0
Exported from NT 8.0.14.1 64 Bit

This is a modification to the existing candlestick pattern indicator included with NT 8. Their version only allows for selecting one pattern at a time. This version allows you to select all or each one individually. Otherwise it operates the same as the old version.

To allow each type to be selected, uncheck the box that says "Find_All" then check the boxes you want the indicator to find.

If you leave the check box "Find_All" checked it will find all regardless of how you have the others set.

I have a decent computer and I notice a little lag when "Find_All" is selected. Use with caution.

Bar Timer Located At The Bar

Download

★★★★★

Version 1.0
Exported from NinjaTrader 8.0.14.1

Modified the existing bar timer to move the time remaining next to the current bar.

If the time left is less than 1 hour it will only display minutes and seconds otherwise it will display hours, minutes and seconds remaining.

Tick Counter Located At The Current Bar

Download

★★★★★

Version: 1.0
Exported with NinjaTrader 8.0.14.1 64 bit.

Details: [Tick Counter Located At The Current Bar](#)

Simple Tick Counter modification to the one included with NinjaTrader 8 that replaces the one located at the bottom right of the screen and places it next to the current bar.

The size of the text is determined by the font size you have set for the chart. The color is also automatically set based on the text color settings you have set for that chart.

This is my first indicator modification, please let me know if you have issues importing.

Exactly what I was looking for! However, it would be nice to be able to select the font,

font size and color. In NT7, I use a smaller font size than what is set for the chart and

when bored while waiting for a trade setup, I am always adjusting my charts appearance.

This indicator gives a choice for drawing the divergence lines for FisherTransform and also for the MacDhistogram.

I want to give all the credit to Cory who made it possible for the FisherTransform to have the divergence lines work in this indicator. I added the ability for the indicator to count how many times divergence's occur because its handy sometimes to see how different time periods affect divergence.

Quantismo 😊

[TimeSlot](#)

[Download](#)

★★★★★

Hello Traders, there are several reasons to mark certain times. Perhaps you like to mark the 30 and 60 minute time slots, the open of the market, the volatility slots or news releases. This indicator will paint from your start time to your end time. You can have several instances with different times and different colors and opacity.

I have used this indicator through several instances of NT 8 and several bar types with no issues. This was compiled on NT8 V 14.2

Let me know how you are using it.

Trade Well...
Bob

The only way to make this even better is to allow multiple time slots in one indicator. T

his would prevent us from having to load the indicator multiple times. If that already do

es exist maybe I'm just missing it!
