**Traders Dynamic Index**

Updated with bug fixes by Sim22.

A comprehensive but helpful indicator that uses RSI (Relative Strength Index), its moving averages, and volatility bands (based on Bollinger Bands) to offer traders a full picture of the current market situation.

Input parameters

RSI\_Period (default = 13) — period in bars for calculation of RSI. Recommended range is 14 or 21.

RSI\_Price (default = PRICE\_CLOSE) — price type to use in RSI calculation.

Volatility\_Band (default = 34) — period in bars for volatility bands calculation. Recommended range is between 20 and 40. The lower the value the more sensitive the band.

StdDev (default = 1.6185) — standard deviation multiplier for volatility bands. It is not recommended to change this parameter.

RSI\_Price\_Line (default = 2) — period of the first moving average (fast) of RSI.

RSI\_Price\_Type (default = MODE\_SMA) — type of the first moving average of RSI.

Trade\_Signal\_Line (default = 7) — period of the second moving average (slow) of RSI.

Trade\_Signal\_Type (default = MODE\_SMA) — type of the second moving average of RSI.

For scalping, enter long when the green line is above the red line and enter short when the red line is the above green line.

Thank you.

[More...](#)

For short-term trading, enter long when the green is above both the red and the yellow lines; enter short when the red one is above both the green and the yellow ones.

For medium-term trading, go long under the same conditions as for the short-term trading but only when all lines are below 50; to go short — the same but above 50.

Mind the blue volatility band as it points to the long-term trend strength and volatility when wide. Steep green line changes also signal short-term market volatility.

### Volume Overlay V1.2 NT8b10 Update

Just like StockCharts.com overlayed volume.

- \* Set max volume height as a percentage of the total panel height.
- \* Hide/show the volume via the button.

Remember this is for the beta version so any future bugs please PM me.

Update: March 2016.

Fixed issue with plotting upside down in other than first panel.

Update: May 2016.

Auto set margin to zero.

### Delta Package V2 NT8b13

Download

★★★★★

### Delta Package V2

[DeltaV3 is here](#)

Updated to NT8b13 Oct 2016

Based on GOM delta indicators.

Includes:

- \* Both cumulative delta and bar delta.
  - \* BidAsk.
  - \* UpDown Tick.
- \* UpDown Tick with continuation.
- \* UpDown One Tick with continuation.

\* Gom Hybrid.

Also other options:

- \* EOD/ new session reset to zero.
- \* Inverse delta - plot the 'Limit' orders.
- \* Size filter.
- \* Candle outlines.

**Make sure you enable [Tick Replay](#) to use this historically! You will not need Gom recorder for this.**

However, Tick replay will not work with some Renko bars due to RemoveLastBar() 😊

Thanks to Zondor for his 'unGom' conversion.

Please report bugs to me via PM rather than in the comments. Thank you.

Truly excellent - extremely useful

November 8th, 2016 09:29 AM **jakelly** ★★★★★  
Many thanks

October 25th, 2016 07:16 PM **colinchng** ★★★★★  
I don't know if this is the place to ask questions.

I have just downloaded the cumulative delta.

However, I can see the delta moving at the right scale axis.

### Value Charts V1 NT8b9

Download

★★★★★

### Value Charts V1 NT8b9

Promoted by David Stendahl in  
'Dynamic Trading Indicator: Winning with Value Charts and Price Action Profile'.  
Popularized by the Hubert Senters from TTM.

Stendahl says:  
"Value Charts use  
dynamic volatility units to effectively adjust to changing market  
volatility."

Concept:

- The value chart is divided into zones.
- 4 to -4 is fair value. Avoid buying/shorting here.
- 4 to 8 is overbought/expensive.
- 4 to -8 is oversold/good value.

Strategies are to fade the Value Chart extremes in a choppy market, and to buy dips (-8) in an uptrend.

PDF of Stendahl interview included in .zip file, so **you must extract the file first before importing!**

This will be - SHOULD BE - the indicator to take all prizes in 2017. Great great stuff her

e sim22!!! Thank you for sharing.

[More...](#)**Relative Strength V1 NT8b9**[Download](#)

★★★★★

**Relative Strength V1 NT8b9.**Measures [relative strength](#) between two instruments.

\* Includes 3 formulae:

[Tom Dorsey](#)[Mansfield/ Weinstein](#)[Investor\RT](#)

\* Includes option to start at a fixed date. Option to start from high or low of this date.

Known limitations:

\* Will only work on time-based or EOD bars.

\* Intra-day session times may differ between symbols so please take this into account.

\* Will not currently use fixed date intra-day.

\* Smoothed function is not available on fixed date.  
(These may be available at a later date).

\* I have opted not to multiply the Dorsey formula by 100. He states the results are easier to read but I do not think they reflect the true ratio.

I have tried to test all scenarios but let me know if you find a bug.

Excellent. Is it possible to re-compile to NT8.02? It's not possible to compile a automat

ed action using it, which is perfect to work in conjunction with T3.

[More...](#)**Quarterly Bars Type NT8b9**[Download](#)

★★★★★

**Quarterly Bars Type NT8b9**

Each bar contains data within a US quarter. Jan-Mar, Apr-Jun, Jul-Sep, Oct-Dec.

This differs from using 3 \* Monthly bars.

I have tested the values quite thoroughly so it should be accurate.  
Let me know otherwise.

You can add this bars type to the menu by clicking *Configure*.

I love you! Thanks! Was just complainign that the "mandatory" update to 8 made me leave my

favorite Multi Period bars behind... Thank you!

[CongestionBox4RangeNT8](#)

Download

★★★★★

Updated: 9/10/2016

Fixed problem with dataseries which prevented the indicator from being saved with the workspace.

Converted from the NT7 version. Originally design for range bars to box in those congestion areas produced by up and down bars that resulted from the market not going anywhere (it's not perfect). But some folks had success using the indicator on minute charts. The box is delayed and the red and green colors are even more delay but this was not meant to be a real time indicator. Added public series to hold values for upper levels, lower levels, and bar numbers, to be accessed from strategies.

**Note:** Right now the indicator do not show draw objects when added to a strategy using AddChartIndicator therefore ist's not going to draw rectangles on charts. Ninjatrade trader is aware of the bug and said it is already fixed and we will see it in the next release. *Using Beta Version 8.0.0.8 (Multi-Broker).*

Special thanks to Sirkin01 and philm for their ideas to help improve the indicator.

★★★★★

to improve it. I did not test it on a too large list of symbols.

Essentially, it will export into MySQL full list of tickers that you'd load into the "Instrument" area of the Strategy.

Not the perfect code, however - people are more than welcome
