FootPrint Chart for NT8

[Download](#)

★★★★★

Updates 7/14/2016:

- complied on NT8b12, may not work in earlier versions
- thanks to Sim22 for some great code modifications to make the chart more stable and kill some bugs

This is a standard footprint chart that shows bid/ask market orders or volume/delta bars. It doesn't have a lot of the bells and whistles that some other (paid) versions have, but I find it sufficient for my needs.

Candlestick bars can be shown to the left of the footprint bars and/or as an outline in the footprint bar. It also allows to indicate the close and high volume bars in the footprint.

If you find any bugs or have any enhancement suggestions, please PM me.

NOTES:

You must turn on Tick Replay otherwise the chart will not show historical bar values. Charts that do not support Tick Replay (Renko for example) will not work. Line charts will also not show the footprint bars.

Charts with a high Days to Load value (15+) will take more time to initially load as there's a lot of values to historically calculate before the chart can be displayed.

I suggest using a fixed width font (Consolas, Lucida, etc.) for the Bar Font as the numbers line up and makes the chart more readable.

There's no easy way that I found to auto scale the bar width and spacing based on the font size, so these are manual adjustments via Bar Spacing and Bar Width. Bar Spacing controls the spacing between the bars and Bar Width controls how wide the bars are. If you change the font from the default Consolas 12px, you may need to increase or decrease these values to adjust the bars.

The chart will attempt to auto scale to compress the footprint bars so there's little to no spacing between the bars. The scaling is based on the chart window size, so if you size the window small, it may not look great if there's a lot of bars on the chart. If you don't like the auto scaling, you can turn it off in the indicator properties via Visual->Auto scale.

Credits: The OnMarketData algorithm to calculate volume values was taken from the 'bid ask for ninja8' indicator by @zohar.

Hello friend i've downloaded the indicator you have in the post and it works very good but

I have a little problem when I add it to a strategy that I want to develop all the graphi

c part of it is runs and the data of the candle that is in progress is not printing.

May 1st, 2018 02:21 PM **hautetoddy** ★★★★★
Most excellent. Thank you

April 12th, 2018 02:34 AM **robert2555** ★★★★★
Awesome work! The only thing I miss, is that it doesn't show the imbalances.

[Sample - How to manipulate MarketAnalyzer display V1 NT8b11](#)

[Download](#)

Sample - How to manipulate MarketAnalyzer display V1 NT8b11

This is only a basic sample I've been toying with. You can use this concept for coding your own indicators. I became frustrated with the lack of display customization I've been accustomed to with other platforms (TS RadarScreens etc.) so I thought I'd play with some ideas.

On my analyzer I want values, colors and arrows. Normal fonts don't really have that flexibility.

I made four new fonts that are packed with heaps of new symbols and arrows so it should suit everyone.

(Sorry, only Latin type alphabet included - if you need Russian or something, let me know).

To access the new characters, open Character Map and peruse. See instructions.

I also had the issue of coloring the analyzer cells to the conditions I wanted. Is an EMA value of 1225.25 up or down?

I have modified the code to deceive the analyzer so it will color the cells accordingly.

I have also added a 'barsAgo' figure that gives you an idea of how to add extra values to your display.

It's not exactly finesse but it works 😊

Please extract the zip file first. It will not import directly to NinjaTrader. Import the fonts first before opening NT8 or it will not detect the fonts are installed

Find included:

- * Full instructions. Please read them first!
- * Four new fonts that are packed with 100's of new symbols and arrows.
- * Template.
- * Code on how to manipulate your market analyzer display.

Small shortcomings:

Read the instructions.

Remember this is for Beta11 NT8, so any bugs or suggestions please PM me accordingly.

Remember to read the instructions within the zip file

LA

[Drawing Tool Toolbar V3.5 NT8b11](#)

[Download](#)

Drawing Tool Toolbar V3.5 NT8b11

Critical fix V3.5. Please remove all previous versions from your charts before installing, then reboot NT8.

*As of NT8 beta 11 this is functional but may need updating in the future. So please be patient. **The toolbar still has minor bugs** (see ** section at the bottom) so please recheck here for new updates from time to time. Please let me know if you are having any unusual issues, since it is working for most users. Since we are all still learning the intricacies of NT8, this toolbar is a project in progress 😊

Make sure you extract the zip file first or it won't import! When you download the zip file it will still be named V1....this is a forum issue....but you will find the updated version inside. Inside you will find instructions and icons to use. **Read the instructions carefully** or you will have icons missing etc.

December 3rd, 2018 04:42 PM **BKOp**

Thank you a bunch! Version 3.5 works with NT8 v 8.0.16.3, even though the Chart Trader add

s extra open space to the left and right of your toolbar. Another of my toolbars has the s

ame issue, perhaps Ninja will repair this in a subsequent release. I edited and re-compile

August 21st, 2018 10:21 PM **TickedOff**

This isn't working for NT8 for me it says its made for an older incompatible version

July 19th, 2018 10:20 PM **BoltTrader**

- * Appropriate drawing tools have a drop-down color palette.
- * Toolbar width automatically adjusts to the height of the chart to accommodate the icons.
- * If you can code: You can add your own custom drawing tools with comments to help you with insertion.

Coding examples:

- * Multi-dimensional arrays
- * Working with grids/wrap panels
- * Windows and NT8 menus
- * Adding bitmap images to a menu
- * Using virtual keystrokes to activate hot keys
- * Accessing drawn objects and manipulating their properties.
- * Parsing string values

Version 2 is also included. It is now superseded by V3 but included for code examples using buttons instead of menus.

A big thank you to Chelsea Bell @ NinjaTrader for the toolbar structure sample. This toolbar had to be completely re-engineered for Windows Presentation Foundation.

As always, please send me a personal message if you have a bug, query or request.

Update history and potential problems:

Update V3.5 July 1 - Critical Fix: Fixed some termination issues from V3.3.

Update V3.4 June 26 - Stopped the toolbar from hijacking indicator-created drawing objects.

Update V3.3 Fixed Andrews Pitchfork channel colors.
Added complete removal of objects upon termination.

**** Known issues reported, which I will endeavor to fix:**

1. Issues with tabbed charts. Toolbar replicates itself when using tabbed charts.
2. Drawing tools will not change color on a tabbed (behind) chart.
3. Arc will not custom paint an area color. (Probably NT8 bug).

Thank you very much! As I am transitioning to NT8 this tool is a must for me.

Calendar Day bars + Moon Phases V1.1 NT8b11

Download

Calendar Day bars + Moon Phases V1.2 NT8b13

Update 9 Jun:
The moon phase was slightly out. I have added code to take into account UTC time, different time zones and exchanges.
Update 19 Nov:
Some had troubles importing the indicator due to older beta versions.

This one was a bit of a challenge so I thought I'd give it a go 😊

Calendar Day Bars are my attempt to do what NT has not yet done..... that is, plot bars in calendar days not just trading days.

Why would anybody need this?

1. W.D.Gann often used 'natural' days in his analysis.
2. When using astrology and geometry they can benefit from plotting indicators on all calendar days.
3. When price/time 'squaring' a chart, calendar day bars can provide different results to daily bars only.

You should use the Calendar Day bar chartstyle as this will omit plotting the dummy weekend bars.

Find included a little 'Moon Phase' indicator, that plots the four major phases of the moon's cycle. If you use Calendar Day bars the moon phase will often plot on the weekends or holidays, the correct day.

Please read the instructions within the zip file first.

To extract the zip file: Right click on the file > Extract All.
You will need to import the 'Jyotish' font type included.

Remember this is for beta so please PM me for any problems or suggestions.

PriceActionSwing and PriceActionSwingOscillator for NT8

Download

Updates on 7/7/16:
- Added the PriceActionSwingOscillator

Updates on 5/17/16:
- Updated to run on NT8b11, may not run on earlier beta versions
- Corrected issue with ambiguous method names between the System.Drawing and System.Windows.Media namespaces
- Removed some stray Print statements used in debugging
- Fixed issue with chart not auto scaling
- Added option to show only ticks in the price swings
- Shortened the display name to "PriceActionSwing (Instrument, BarsPeriod, SwingType, SwingSize)"

This is a NT8 conversion of the PriceActionSwing and PriceActionSwingOscillator indicators written by @dorschden. These indicators are ones that are recommended for use with the Jigsaw tools for entry/exit bias. There are three files, PriceActionSwing.cs and PriceActionSwingOscillator.cs in the Indicators folder and PriceActionSwingBaseMethods.cs in the AddOns folder.

Original thread on what this indicator does is [here](#).

Tested as thoroughly as possible, any issues, please PM me.

Stochastics and Double Stochastics 'Any Input' with colors V1.1 update NT8b11

Important update May 2016:

*Moved input code to State.DataLoaded due to exceptions when used in the market Analyzer.

*Slight improvement in Decimal places formatter

* Use any input such as an indicator, including [delta](#).

* Colored overbought and oversold regions.

* Reversal and 'Poop and Pop' signals.

* Reverse colors option for DStoch.

* Decimal places enum for price markers.

* [Gapless](#) option. Only for price series, however you can use a gapless indicator instead as the input.

Code examples:

* How to tell an indicator whether 'Input' is an instrument price or another indicator value.

Code

```
if (Input is PriceSeries)
```

- * Creating colored regions.
- * Limiting plots to max/min values.
- * Custom decimal places code for use in UI.

Remember this is for Beta so please inform me via PM if you have any bugs, problems or suggestions.

[Better Renko Bar Type NJ 8.0.0.13](#)
[Download](#)

★★★★★

This is the NinjaTrader 8 version of BetterRenkoV2.

This Renko bar type is backtestable. It does not generate false "fill-in" bars. It maintains a true OHLC and displays properly with the Candlestick ChartStyle. If you want it to look like bricks, use the BetterBrick ChartStyle.

This is a tick-based bar, so initial loading can be slow. The NT8 "Break at EOD" feature is also supported, allowing bars to continue across session breaks.

You can find the discussion thread here: <https://futures.io/elite-circle/4978-better-renko.html>

History:

v1 20100807 - @Aslan created BetterRenko to address issues with other types of Renko bars

v2 20101118 - @Aslan changed initial brick alignment to brick size

v2 20150719 - @Dalebru converted to NT8. Exported with NinjaTrader 8.0.0.5

v2 20160508 - @antonma fixed SessionIterator compiler error for NinjaTrader 8.0.0.9

v2 20160910 - @antonma fixed SessionIterator error for NinjaTrader 8.0.0.13

wondering if anyone knows of a free version

of the "Wicked Renko" for NT8 that is what I truly desire.

July 11th, 2017 06:49 AM **Bullywig** ★★★★★

Is there a better brick chart style available for download on NT8?

[More...](#)

[OsMA Moving Average of Oscillator V1 NT8.0.0.10 Beta](#)
[Download](#)

★★★

"The Moving Average of Oscillator (OsMA), is an indicator that is calculated by taking the difference between a shorter-term moving average and a longer-term moving average. The two most common are the 12 period moving average and the 26 period moving averages. Because of this fact, it is best described as a modification of the classic MACD Indicator. A cross through the zero or center line can be a very simple way to decide if momentum is gaining to the bullish side, or if it is falling to the bearish side. Many traders will use the side of the line that the histogram is on to help them decide which direction they want to be in a particular market.

This indicator can be used to spot divergences as well. A divergence is simply when price isn't in tune with actual underlying momentum. During divergence, you may have a new high on the price chart, but the OsMa is failing to make new highs." -fxstrategy.com

Converted from the old OsMA in NT6.5/7 which itself is derived from the MACD indicator. For me it is the Diff line from the MACD, but with more energy and better divergences.
