Thanks

January 9th, 2019 02:56 PM Alexawl

What are the recommended settings? This looks like a pretty nice indicator... Thank you.

November 18th, 2018 10:56 AM ShaunG ***** Makes life much easier!

Thanks very much.

November 15th, 2018 04:07 PM agan1337 Thank you very much !!!!

Great Indicator

Delta Package V3 NT8.0.2 with COT, HA and strategy sample code

44444

Delta Package V3 NT8.0.2 now with commitment of traders (COT) and heiken-ashi

Update Feb 2017: Changed "Show above / below EMA colors" to false to avoid confusion.

Minor fix 30 Dec: Added ability to change bar width manually. Note, if you have any custom built strategies using DeltaV3 then you will have to adjust your code as per the strategy sample included.

New: Sample code for use in a strategy is included. The strategy does not do anything, it simply shows how to access the delta values. It works, I've tested it. Make sure you use TickReplay on your host chart if you want historical values accessed within a strategy.

Includes everything from V2 here as well as these additions:

 Commitment of traders: high, low and total.
 EMA plot: Set to normal, gapless and reset at session open.
 Heiken Ashi: Chose from the algorithms of Dan Valcu (standard) or Sylvain Vervoort.

4. Painbars based on delta values or above/below the ema.

Plus general improvements.....

Make sure you enable Tick Replay to use this historically! You will not need Gom recorder for this.

However, Tick replay will not work with some Renko bars due to RemoveLastBar()

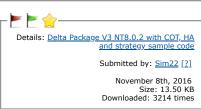

*Occasionally if the bid/ask plots don't look quite right, especially if you haven't connected for a few days, make sure you right-click on the chart and select "Reload all Historical Data".

(1)

** Please report bugs to me via PM rather than in the comments. Thank you.

Here is a picture of how you can use delta for your trading.

I am not affiliated with this person or website, but you can get some ideas here.

February 25th, 2019 10:49 AM sairamss ****** Thank you for this indicator. Is there a forum here to discuss this?

September 28th, 2018 12:04 PM Tangotx

Excellent! Thanks so much for the share!!!!!

December 18th, 2017 09:14 AM mariohuegon Awesome, Thank you

December 3rd, 2017 03:41 PM **JTT8** Thank you!

ColorInputSeriesSlopeChanges

Download

AAAAA

I created a universal indicator that will alter the color based on slope change of "ANY" distinct, single-value dataseries in any panel.

To use this, you need to learn how to define the input series for the indicator (all done via the NT8 UI). $\,$

You can use "ANY" other available dataseries as input and the color change will be applied. No programing required; upper Bollinger band, lower Keltner band, HMA, TSI, MACD, etc... any indicator you have on your system can be used as the input dataseries for this

You need to understand how to change input series to use this indicator. This works the same as it did in previous Nijatrader

Read up on this here for NT8

1.) go to control panel

- 2.) select help guide (F1)
- 3.) open Operations by selecting arrow head 4.) open Chart by selecting arrow head
- 5.) select Working with Indicators document 6.) open How to edit an indicator's parameters by selecting arrow head

scroll to bottom of this display to read about changing indicator input series

Note, this feature is recursive meaning you can do this multiple times for example ColorInputSeriesSlopeChanges(ema(volume)))

You can change the colors used, the defaults are Red (down), Yellow(same or peak), or Green(up).

Yellow can indicate values that are identical but it can also represent what I call Peak. The Peak value is the bar that is the apex of the slope change (ie from up to down). You can also toggle the display of Peak off or on.

February 15th, 2018 12:49 PM nathans01

im attempting to turn a wma into a slope color. Is this possible with this indicator? Coul

d you give me a bit more direction on how to do that.

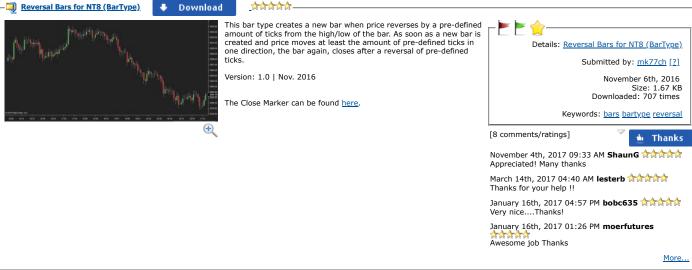

November 18th, 2017 01:09 AM InsideTheMarket Exactly what I was looking for. Thanks.

Am I able to use in strategy builder or code to test if the plot is currently Green or wen

November 7th, 2016 10:09 PM FMTrader ******

solution.

November 6th, 2016 08:04 PM **zohar *************Thank you dear friend to all of your indicators.

The indicator plots supply and demand based zones from various time frames on the chart. It also adds a context menu item to the default Ninjatrader context menu to hide and show active and broken

Details: Supply Demand Zones for NT8 (MTF)

Simply totals the seconds required to draw a bar. Designed to be used with non-time based bars. Includes 2 horizontal reference lines, for example can have the 1st line represent 60 seconds (1 minute) and 2nd line set to 180 seconds (3 minute). Bars change to red if the number of seconds exceeds your desired Maxsec threshold, for example turns bars red if 120 seconds (2 minutes) is exceeded. Includes ability to draw a SMA of the time as well that defaults to a 5 period.

Thank you for updating. I really like this tool for syncing my various tick charts.

Big Candle v1.0

Identify unusually large price movements. If the range for the bar is outside of the standard deviation then the bar gets highlighted. There are also options to draw arrows on your main chart, and trigger alerts.

Really good at warning you of large movements triggered by news

Lines on the indicator show you the average range, and how much range deviates from that average. Basically if that bar is above the top line it will be highlighted. Try different values for the periods and deviation factor to get the movements that you want highlighted.

I recommend using the plots on the indicator to help get the settings that you want, and then resizing the panel to hide the plot. Then just rely on the arrows and alerts.

Files can also be obtained from Github:

https://github.com/twdsje/Ninjatrader-scripts/blob/master/ExportNinjaScript/BigCandle.zip
