📋 **CongestionBoxBC**   [⬇ Download]   ★★★★★

Hello Traders. This indicator looks for a congestion of candles and then a break out. Once the breakout is confirmed, it paints the box up or down and indicates the POC of that congestion box. The indicator is working in real time, but does not paint the box until the breakout is confirmed (2bars). You can change the Box Color if you want to see all of the boxes forming. I find that distracting.

I downloaded the CongestionBox4RNT8 a few months ago and I like the indicator, but there were a few annoying problems. This version fixes the problems that I found in my use.

Fixes:
1. The colors did not stick from startup to startup in the original version...
2. The original consumed a lot of resources, so I set a timer so that it only calculated the boxes during times that matter to the user. This cuts down on the calculations and memory use. You can set the start/stop time to what you want.

R1: Trader Contrax was having problems with autoscaling in his setup. He found what needed to be changed (Thx). Most people will not notice a difference so I edited the indie, left the name the same and just updated the file.

Several traders are having 'freezing' problems. This indie is a resource hog. You want to run as little history as possible with Congestion Box. One trick that I use is to have a transparent chart on the same panel as my main chart. Let's say you have a 5min chart. Add a second 5min chart to the same panel, transparent candles, wicks, etc, with 1 day history. The Congestion Box uses the 1 day chart as its input. You can have several instances of charts on the same panel.. A great NT attribute.

R2: **Member jabeztrading, the original developer of the indicator, fixed the issue with the button recurring. This fix also fixed the resource problem.** Excellent work!!!

Please let me know if you find any other issues.
Thanks
Bob

Here is the original description...Converted from the NT7 version. Originally design for range bars to box in those congestion areas produced by up and down bars that resulted from the market not going anywhere (it's not perfect).
But some folks had success using the indicator on minute charts.
The box is delayed and the red and green colors are even more delay but this was not meant to be a real time indicator.

I think you have done a fantastic job here, I am trying it out in sim with great results,

I hope that you can one day compile a strategy based on this indicator thank you.

📦 **Market Replay CL 01-19 (NT8)**   [⬇ Download]
NT 8 Market Replay data for CL

Contract: CL 01-19

Download instructions:

dowload and unzip file in NT 8 replay folder
Documents\NinjaTrader 8\db\replay
The file will create a folder with the relevant front month and a series of .nrd files inside (one per day)

Make sure to use the "extract here" function as shown, and not the "Extract to" function, to avoid the creation of a folder within a folder.

[👍 Thanks]

Note: the archive contains only the dates with the most volume for this contract, meaning, this is data relevant only to when the contract becomes the front month.

📋 **MaxStopFailsafe Hidden Auto Stop**   [⬇ Download]   ★★★★★

MaxStopFailsafe - Hidden Auto Stop   **Download**   ★★★★★

Guys I paid for this indicator to be developed.
It's basically a hidden automatic "stop order"

I call it my failsafe loss limiter, as when trading using NT8 I have a bad habit of removing the visible stops on the chart at times to give a trade room to breathe and then every so often I end up getting run over by a sharp move and I wanted to prevent that from happening. Stop the bad habit so to speak. So i had this indicator developed which could run in the background.

Basically you attach it to your chart like any other indicator, set your amount of ticks stop loss in the settings and away you go. Then whenever you place a trade via NT8 chart trader and forget to use a stop, when your set level/amount of ticks against you is hit, you will be stopped out automatically.

Now, forewarning:
When I used the indicator it worked well but then there were a couple of issues:

1. At times, when say I had it set to 16 ticks stop loss and I wanted to change my mind and I changed the set level to say 12 ticks in the sttings, even though I changed it in the indicator settings, the original set level was filled, not the new level.

And,

2. When I remove the indicator from the chart, the auto stop would still function and I'd get filled even though I had removed It from the chart. It only removes from the chart when I removed the actual indicator from the ninjascriptor editor indicators list.

Both of the above shouldn't happen.

I asked my programmer to look at this, but he couldn't find anything wrong in the programming. So if any of you programmers on here would like to use the indicator and maybe give it a test and fix the above issues if you have them I think it would be helpful indicator for NT8 users.

I really liked using this indicator as it forces my own limits upon me and saves me from my own bad habits of moving / removing stops.

Although sometimes you do have to change the stop size due to changing market conditions/volatility.

😊 This is great! Best loaded onto one chart only as it functions on the chart trader

. I would also like similar indicator, which limits daily max loss by account. Any suggest

ions anyone?

mkHarmonics_v1.1   **Download**   ★★★★★

This is just a quick fix to mkHarmonics to fix an XML save issue preventing the indicator from staying on a chart after exiting (but saving). It also was causing an error if you tried to save the settings presets.

I simply added [XmlIgnore()] and commented out [NinjaScriptProperty] for all the brush and font properties.

The original copyright is @mk77ch for the NT7 version. The NT8 conversion from: @psytopy.

Skid Trender Version 1.2   ⬇ Download

⭐⭐⭐⭐⭐

So there was this indicator on ThinkorSwim I liked and I knew it was
moving averages but it took me awhile to figure out. (I'm not a
programmer) Here is the xml so you can have it also. The reason I
like it is because the two sets will gap apart when trending. For me, it
gives me a clear picture. You must have EMASlopeColor for it to work
found here.

https://futures.io/local_links.php?

action=ratelink&linkid=1774&catid=27&lpage=1&ratesort=D&page=1

Download file: Then place the file in File>Documents>Ninjatrader 8>Templates>Chart

This is Version 1.2
Because the first had the data series set to "Default 24 x 5". This causes tick chart candles to be
wrong. Special Thanks to @MiniP for pointing this out, and @bobwest for fixing it.
If you downloaded the first Skid Trender chart, change your settings in Data Series to "Use Instrument Settings"
this fixes the problem. Added Priceline to this .XML version.
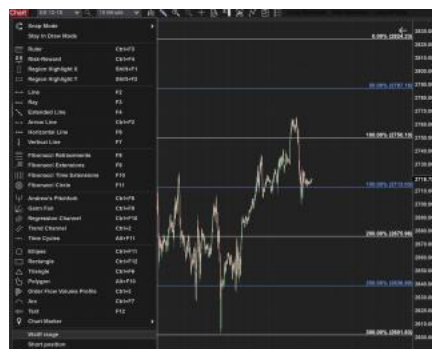

Discussion and updates found here:

https://futures.io/elite-circle/45906-ninjatrader-7-verses-8-verses-tos-thinkorswim-trading-platform-skid-s-journey.html

Enjoy

Skid 😎

Hi I know you put alot of work into this but i am not
getting the same chart as the one in

the picture i followed all the steps it just shows
horizontal and vertical boxes on the s

creen with yellow doted price line, please advise.

November 28th, 2018 08:36 PM **lager2** ⭐⭐⭐⭐⭐
Nice! Name matches the action. Thx

More...

Wolf range drawing tool   ⬇ Download

⭐⭐⭐⭐⭐

For my trading i make use of two different fib retracement templates.
One template with the 50% and 61.8% retracements, and a 2nd
template with the wolf range to determine the market geometry.
Although ninja supports templates for the fibonacci levels, this
requires me to select the correct fib. level template every time i want
to draw one of them.

To make live easier i made a copy of the fib. retracement drawing
tool, modified it so it uses the the wolff range settings by default.
That way i don't have to switch templates anymore and i can just
select the normal fib tool for my 50%/61.8% retracements and the
wolf range drawing tool for drawing a wolf range

Offcourse you also adjust it and use other retracement templates as
you like.

thank's a lot

RangeRider for NT8 V1.0   ⬇ Download

⭐⭐⭐⭐

The general idea was to better clarify both entry and exit points.

So I created a combination Bollinger Bands and Pivot Points indicator,
but utilizing the MIN and MAX functions in order to eliminate the
smoothing that comes with Bollinger Bands. By doing so market
fluctuations are (for me at least) more clearly defined.

Though I mostly use range bars other bar types also work well.

It is not unusual for me to "turn off" the bars themselves by making
them transparent. Much less distracting clutter on the screen and I
like things simple.

However, early on it is best to leave the bars visible in order to fully
understand the various patterns created by the indicator. Whether in
chop or a trending market certain patterns quite often become

obvious. And those patterns repeat time and time again.
